

**Project: NEW GLASS PROTECTION ONSITE**  
**Title: LATIFA CENTER - LEBANON**  
**Date: OCTOBER 2008**

Latifa Center is located on Mansourieh's main road, at the west of the Lebanese capital Beirut. It is a business center with a modern architectural design.

Using non-aggressive materials, the glass was renovated and restored to a chemically clean surface. Then it was protected from atmospheric pollution and other contaminants.

Since the center has only glass facades exposed to traffic and atmospheric pollution, glass cleanliness and protection is a high priority. Therefore, 2200 m2 of glass were treated onsite with ClearShield.

As a result, the glass looked new, became easier to clean, with an improved clarity and visibility. "The results are fantastic and valuable!", the owner commented.
